About This Game

In Shieldwall Chronicles: Swords of the North, you lead a mercenary band into the perilous and cold northlands of Tarren. Your search for fortune will see you pitch blade and spell book against a host of enemies including the undead, demons, and lizardmen and many other creatures. In a battle that is part game-book and part tactical RPG, you will build a powerful band of warriors and wizards and tilt the balance of power in the northern kingdoms.

Key Features

- **Take part in deep, turn-based combat.** Combat is realistic and incorporates details such as weapon range, damage effects, and counter attacks without slowing down gameplay. Players will also have to use cover and line of sight effectively to be successful.
- **Build a party from among 15 different classes.** Choose a party of six heroes that range from scholarly wizards to hardened warriors. Using each character type to their fullest is vital to securing victory as most excel in only certain tasks. Wizards have massively destructive magic but will fall quickly to a simple spear thrust while great warriors can hold off a horde if properly supported.
- **A unique morale system adds an entirely new tactical layer to the combat.** Warriors will fight far better if they believe the tide of battle is on their side and will begin to panic if they believe otherwise. Watching a friend fall or an enemy leader slain drastically affects morale. Arrows and spells, even when they miss, will affect the courage of both friends and foes in their area of effect. Finally, the bloodlust mechanic means certain warriors will find new sources of energy for each foe they slay.

-
- **Collect hundreds of powerful magic items to equip your party.** Each character can equip up to nine items from swords, shields, cloaks, rings to helmets. Each item can range from a common item that grants only a small benefit to legendary items that can both boost stats and grant entirely new powers to its bearer. Fighters can equip magical rings that can allow them to conjure fireballs or summon undead guardians, for example. The magic item system allows you to customize your party even further and develop entirely new tactics and battle plans.
 - **Enjoy over 50 hours of gameplay in the campaign.** Your journey will see you lead your party across snow-covered wilderness, through dark caverns, ancient ruins and the bloody streets of great cities. Battles can be replayed at various difficulties and no level cap provides no end of enjoyment for the die-hard player.
 - **Delve into a gritty, realistic world that blends dark age history and culture with fantasy races and monsters.** The northern kingdoms of Tarren are places where men fight in shield walls with spear, axe and sword against elves, dwarfs, goblins and even dragons. Wizards and monsters are powerful but can still be defeated with sound tactics, armour and courage.

It's well worth the price if you're a fan of tactical battles. As others have noted, it's not a great story -- the focus is heavily on combat and customizing your party. I appreciate not being locked into a fixed party and being able to swap out other classes as needed and it's a significant step up from the developer's prior releases.

. Excellent game for the money if you are an old-school type gamer. I own all the games this developer has put out so far and have loved them all.

PROs:

Improved graphics from the previous games

Easy to understand

Tactical combat strategy (position really does matter)

Turn based (can get up from the keyboard)

Loot!

Storyline reminiscent of PnP days

Can replay battles

Can play as many non-campaign skirmishes as you want

Male/Female choice for each class (no choice before)

Impressive gear customization and easy shop interface

CONs:

Sound was loud (I played it at 1% for comfort, literally)

No on-screen customization of gear*

Very worth the money and I hope the developer continues to put out such wonderful and entertaining games.

* About the no on-screen customization of gear: Not all that disappointing. Having played all four games by this developer, I actually prefer it like it is. You get used to knowing which character is which by what they wear. "But but but, I wanna see the new armor I put on!" Really, your characters are already fully outfitted with gear from the very start. Getting loot or buying shop items are *upgrades*. *Once you look at it that way, the lack of gear graphic changes becomes just about superfluous.*

Will buy their next game, too.
